

Virtual Reality Scavenger Hunt

WHAT: Virtual Reality is an immersive 3-D experience that transports you to real and sometimes imagined environments.

YOUR CHALLENGE: Using Google Cardboard & Google Street View, navigate to your home address or somewhere you've always wanted to go.

Use the blank sheet of paper to record:

- Examples of what kinds of shapes you can spot.
- Count how many of each shape you find.
- Record if you found any structures that use two or more shapes fit together.
- If you found buildings: what shape were the roofs made out of? Where they all the same or different? Why do you think they were built using those shapes? (think about the weather/climate where they are located).

Extension for a neighborhood project: use Google maps (right click to measure distance) to get approximate measurements for your neighborhood/community. Recreate your neighborhood as a “Bee-Bot City” using butcher paper and Bee Units.
